

EXP NO: 2

AZURE DEVOPS PROJECT SETUP AND USER STORY MANAGEMENT

Aim:

To set up an Azure DevOps project for efficient collaboration and agile work management.

1. Create An Azure Account

2. Create the First Project in Your Organization

a. After the organization is set up, you'll need to create your first **project**. This is where you'll begin to manage code, pipelines, work items, and more.

b. On the organization's **Home page**, click on the **New Project** button.

c. Enter the project name, description, and visibility options:

Name: Choose a name for the project (e.g., **LMS**).

Description: Optionally, add a description to provide more context about the project.

Visibility: Choose whether you want the project to be **Private** (accessible only to those invited) or **Public** (accessible to anyone).

d. Once you've filled out the details, click **Create** to set up your first project.

3. Once logged in, ensure you are in the correct organization. If you're part of multiple organizations, you can switch between them from the top left corner (next to your user profile). Click on the Organization name, and you should be taken to the Azure DevOps Organization Home page.

The screenshot shows the Azure DevOps Organizations home page. The browser address bar displays `aez.dev.azure.com/me?mkt=en-US`. The Microsoft logo is in the top left, and the user's name "Danya Anandan" with a "Sign out" link is in the top right. The main content area is divided into two columns. The left column features a large orange circular profile picture with the initials "DA", the name "Danya Anandan", the email "danya.a.2024.aids@rajalakshmi.edu.in", a "Microsoft account" dropdown, a location "India", and a phone number. Below this is a section for "Visual Studio Dev Essentials". The right column is titled "Azure DevOps Organizations" and includes a "Create new organization" button. It shows a dropdown for the current organization, "dev.azure.com/241801038 (Owner)". Under the "Projects" section, there are two items: "241801038" and "Online Appointment Booking System", with a "New project" link below. An "Actions" section on the right contains a link to "Open in Visual Studio".

4. Project dashboard

The screenshot displays the Azure DevOps project dashboard for a project named "Online Appointment Booking System". The interface includes a left-hand navigation pane with options like Overview, Summary, Dashboards, Wiki, Boards, Repos, Pipelines, Test Plans, and Artifacts. The main content area features a "Summary" tab with an "About this project" section. This section describes the project as a web-based application for simplifying appointment scheduling and managing service providers. It also mentions the use of Azure DevOps Agile methodology, including Epics, Features, User Stories, Tasks, and Sprints, and the integration of Azure Boards, Repos, and Pipelines. The system aims to improve appointment management by reducing manual work and providing a secure, user-friendly platform. On the right side of the dashboard, there are "Project stats" for the last 7 days, showing 0 boards and 0 work items, and a "Members" section listing 1 member (DA).

About this project Like 0

The Online Appointment Booking System is a web-based application developed to simplify the process of scheduling and managing appointments between users and service providers. The system allows users to register, search for available services, view provider availability, book appointments, make online payments, and receive notifications and reminders.

Service providers can manage their schedules, availability, and appointments efficiently, while administrators can monitor users, providers, bookings, and overall system activities through an admin dashboard.

The project is managed using Azure DevOps Agile methodology, where the development process is divided into Epics, Features, User Stories, Tasks, and Sprints. Azure Boards are used for backlog and sprint planning, Azure Repos for version control, and Azure Pipelines for continuous integration and deployment.

The system aims to improve appointment management by reducing manual work, avoiding scheduling conflicts, enhancing communication, and providing a secure and user-friendly platform.

5.To manage user stories:

a. From the **left-hand navigation menu**, click on **Boards**. This will take you to the main **Boards** page, where you can manage work items, backlogs, and sprints.

b. On the **work items** page, you'll see the option to **Add a work item** at the top. Alternatively, you can find a + button or **Add New Work Item** depending on the view you're in. From the **Add a work item** dropdown, select **User Story**. This will open a form to enter details for the new User Story.

The screenshot shows the Azure DevOps interface for the 'Online Appointment Booking System Team'. The left sidebar contains a navigation menu with options: Overview, Boards, Work items, Boards, Backlogs (selected), Sprints, Queries, Delivery Plans, Analytics views, Repos, Pipelines, and Project settings. The main area is titled 'Online Appointment Booking System Team' and includes a '+ New Work Item' button and a 'View as Board' button. Below this, there are tabs for 'Backlog' and 'Analytics'. The 'Backlog' tab is active, showing a table of work items.
