

EXP NO: 3

SETTING UP EPICS, FEATURES, AND USER STORIES FOR PROJECT PLANNING

Aim:

To learn about how to create epics, user story, features, backlogs for your assigned project.

Create Epic, Features, User Stories, Task

The screenshot shows the Azure DevOps interface for a project named 'Online Appointment Booking System Team'. The 'Backlog' view is active, displaying a list of work items. The left sidebar shows the navigation menu with 'Backlogs' selected. The main area shows a table of work items with columns for Order, Work Item Type, Title, State, Effort, Business Area, Value Area, and Tags.

Order	Work Item Type	Title	State	Effort	Business Area	Value Area	Tags
1	Epic	System Operations & Engagement	New		Business		
2	Epic	Appointment & Booking Management	New		Business		
3	Epic	User & Access Management	New		Business		
	Feature	Registration & Login	New		Business

	Task	Create dashboard, edit API, upload details	New				

1.Fill in Epics

The screenshot shows the detail view of an Epic titled 'User & Access Management' (ID: 32). The left sidebar shows the navigation menu with 'Epic 32' selected. The main area shows the epic's details, including a description, discussion, and planning information. The 'Planning' section shows the priority set to 2. The 'Deployment' section provides instructions on how to track releases and turn on deployment status reporting. The 'Development' section includes a link to add a link to an Azure Repos commit, pull request, or branch to see the status of the work item.

Description

Click to add Description.

Discussion

Add a comment. Use # to link a work item, @ to mention a person, or ! to link a pull request.

Planning

Priority: 2

Risk:

Effort:

Business Value:

Time Criticality:

Start Date:

Select a date...

Deployment

To track releases associated with this work item, go to [Releases](#) and turn on deployment status reporting for Boards in your pipeline's Options menu. [Learn more about deployment status reporting](#)

Development

Add link

Link an Azure Repos [commit](#), [pull request](#) or branch to see the status of

2.Fill in Features

The screenshot shows the Azure DevOps web interface for a project named "Online Appointment Booking System". The main view is for "FEATURE 35: Registration & Login". The interface includes a left sidebar with navigation options like "Boards", "Backlogs", "Repos", and "Pipelines". The main content area is divided into several sections: "Description" (with a placeholder "Click to add Description."), "Discussion" (with a placeholder "Add a comment..."), "Planning" (with fields for Priority, Risk, Effort, Business Value, Time Criticality, Start Date, and Select a date...), and "Deployment" (with a placeholder "To track releases associated with this work item..."). The "Deployment" section also includes a "Development" subsection with an "Add link" button. The top of the interface shows the project name, a search bar, and a user profile icon labeled "DA".

3.Fill in User Story Details

The screenshot shows the Azure DevOps web interface for the same project, but now displaying "USER STORY 37: As a user, I want to log in securely so that I can manage my bookings." The interface is similar to the previous one, but the "Description" section now contains the user story text. The "Planning" section includes "Story Points" and "Priority" (set to 2). The "Deployment" section has a placeholder "To track releases associated with this work item...". The "Development" section includes an "Add link" button. The top of the interface shows the project name, a search bar, and a user profile icon labeled "DA".

Result:

Thus, the creation of epics, features, user story and task has been created successfully.
